

Stabilize & secure feeding tubes & PD catheters

GUSGEAR®

LOCK 3000 BELT

Reduce Cost of Care

The average GJ-related ED visit costs nearly \$2000.

- Reduce the risk of gastrostomy replacement.
- Reduce the risk of PD system breaks.
- Save on staff & labor costs.

Improve Provider Experience

- Reduce urgent phone calls & clinic visits for troubleshooting.
- Free up bed space.
- Improve workflow by allowing caregivers to focus on the primary disease state.

Improve Patient Experience

- Reduce dislodgement, leakage, & hypergranulation.
- Increase patient & parent satisfaction.
- Improve quality of life.

Improve Population Health

- Decrease the risk of site infection.
- Reduce ED visits & readmissions.
- Support Survival till transplant.

60% of pediatric gastrostomy-related ED Visits are due to tube dislodgment.

**Unrivaled securement to protect feeding tubes and PD catheters
without the need for extra adhesive.**

- 100% parent and provider satisfaction
- Fewer ED visits
- Patient's GJ-tube dislodgements reduced from 4 in 2 weeks to zero with the LOCK 3000 Belt

*Reported by Children's Hospital of Alabama
during their LOCK 3000 Belt trial.*
